

AGWA2 Toolbar doesn't contain AGWA2 Tools

Posted by stein - 2008/06/02 14:26

I successfully installed AGWA2. When opening ArcMap 9.2 and checking AGWA2 Toolbar in "Customize", the toolbar appears. BUT: it only contains the three commands "Landcover Modification Tool", "Preferences" and "Raster Legend Tool". The AGWA2 Tools combobox is missing. What can I do?

What is the time stamp on the installer file you are using? The commands you mention have been moved into the AGWA2 Tools combobox for some time, so you must be using an old version. Try downloading the version on the site and installing it after uninstalling the old version.

I downloaded the current version of AGWA 2.x for ArcGIS 9.2.on Monday. I deinstalled it and downloaded it again today. The toolbar is still incomplete. The installer file is from December 18th 2007. I am using ArcMap 9.2 (Build 1324).

Hi Karoline,

I've been looking into what could be causing this and I'm still unsure. With the exception of Spatial Analyst, I believe the installation would not complete successfully if you didn't meet the software prerequisites (.NET Framework 1.1 installed, .NET Framework 2.0 installed, and .NET support installed in the ArcGIS installation). Those are things that you can verify you have installed through Add/Remove Programs and via the ArcGIS Setup program, but like I said in all other cases where those prereq's weren't met the installation never completes so I don't think that's what is happening here.

I think since you didn't get an installation error, there must be something interfering with the display of the AGWA2 Tools menu. I'll do some checking and see if I can think of what could be causing that

interference.

Hi Karoline,

I haven't discovered anything new on my end that could be causing this. Have you had any more luck?
